here's some slides for those curious!

Identification: **ls**of

List of Open Files

lsof [options]

- Very similar to **ps**, with more information by default.
 - Frequently used for monitoring port connections.
 - Use **-i** to list IP sockets.
 - E.g., **ls**of **-i tcp:843** shows all tcp processes on port **843**.
 - Many options...read the man page if you are intrigued.
-
- As with **ps**, often best served with a side of **grep**.
 - More useful for administration, especially when managing a networked interface.
