Identification: **lsof**

List of Open Files

lsof [options]

- Very similar to **ps**, with more information by default.
- Frequently used for monitoring port connections.
- Use -i to list IP sockets.
 - E.g., lsof -i tcp:843 shows all tcp processes on port 843.
- Many options...read the man page if you are intrigued.
- As with ps, often best served with a side of grep.
- More useful for administration, especially when managing a networked interface.
